

Use of Electronic Calculators

Unless expressly forbidden by the examiner, electronic calculators will be allowed by default for all continual assessments and final exams. Candidates may use any authorised scientific or graphing calculator model from the List of Approved Calculators found [here](#).

Prior to the assessment, candidates are responsible to,

- i. ensure that their electronic calculators are silent without any print-out facilities.
- ii. ensure that their calculators are in working condition, because candidates are not allowed to borrow calculators from other candidates, or requests for replacements during the assessments.
- iii. clear all information and programmes, including formulae and text, that may be stored in the calculator memory.

Candidates are not allowed to use calculators with built-in symbolic algebra manipulations, and symbolic differentiation and/or integration. Candidates are also not allowed to use calculators with communication capability with other devices, and/or data storage and retrieval capability for verbal information.

Candidates are not required to go to different departments to have their calculators verified or stamped prior to the assessments. However, it is the responsibility of the candidates to ensure that the functionality of their calculators do not exceed those provided in the list.

Candidates found with unauthorized electronic calculator models on them or in their workspace during the assessment may be deemed to have intent to use that device to gain an unlawful advantage and will be subject to disciplinary proceedings accordingly.

Candidates found to have stored information and programmes in their calculator memory may be deemed to have intent to use the information and programmes to gain an unlawful advantage and will be subject to disciplinary proceedings accordingly.
